

As Certified Public Accountants and Advisors, BRC has developed a cybersecurity practice focused on Business Continuity Planning and Disaster Recovery. Disasters can strike at any moment. What if a pandemic required people to work from home for a year? Or the IT systems that run your business crashed?

**Business continuity planning** (or business continuity and resiliency planning) involves the identification of prevention and recovery mechanisms in response to the potential threats to a company. Any event that could negatively impact operations or human life, such as supply chain interruptions, loss or damage to critical infrastructure or

environmental disasters, and the associated mitigation strategies for each, is included in the plan.

**Disaster recovery** refers to the recovery of critical information technology components that facilitate business activities. Mitigation strategies may include technical resources, personnel roles and responsibilities and the associated policies and procedures.

Disaster Recovery Plan

Policies and procedures for protection and recovery of IT infrastructure

Comprehensive action plan observed before, during and after a disaster

## Services for Business Continuity Planning / Disaster Recovery
